

Student Elective Report

	Cape Town: I stayed at a hostel with other elective students Honolulu: I stayed at an airbnb
	Definitely: overall these were two contrasting elective placements and the nature of the reconstruction that I saw was extremely different. In particular, I think that the hands-on teaching that I received from Dr. Alam was second to none and without a doubt, my best experience during the whole of medical school.
	These have been career-defining placements and have consolidated my interest in head and neck reconstruction.
